

CAR CHARGING POINTS IN VICARAGES

The Diocese will permit the installation of an electric car charging point provided:

1. The car charging point is to a specification approved by the Office for Low Emission Vehicles (OLEV) and installed by an OLEV approved installer, or,
2. The car charging point is specified and installed by the supplier of the electric car.
3. The installer, (either under 1 or 2, above) produces an electrical certificate for the installation.
4. The specification for the charging point has been approved, before installation, by the Property Department.
5. The charging point is either a standard charging point (3kW, 16A) or a fast-charging point (7kw, 32A).

PLEASE NOTE: The Diocese will not pay for the up grading of an existing domestic electricity supply to allow for the installation of an EV fast charging point.

6. The charging point is installed at a minimum of 2 metres away from a public road.
7. The height of the installed EV charger at least 750mm above the ground. This reduces the potential risks of electric shocks and other hazards.
8. The charging point is to be located in position where the charging point cannot be tampered with by others, i.e., within the fenced enclosure or inside the garage.
9. The maintenance and repair of the charging point will be the responsibility of the Occupier requesting the installation for the duration of their residence.
10. On vacating the property, the charging point will become part of the fixed electrical installation under the care of the Property department.
11. It would be the responsibility of any subsequent Occupier to provide a new EV charging point if it was found that an existing charging point was not suitable for their particular electric vehicle.
